S16738
Northbobilinogen synthase (EC 4.2.1.24) precursor - Martens's spike moss (fragment)
N.Alternate names: delta-aminolevulinic acid dehydratase
C;Species: Selaginella martensii (Martens's spike moss)
C;Date: 21-Nov-1993 #sequence_revision 10-Nov-1995 #text_change 16-Jul-1999
C;Accession: S16738
R;Schaumburg, A.; Schneider-Poetsch, H.J.A.W.
Submitted to the EMBL Data Library, August 1991

Cybable outer membrane secretory protein spiA [imported] - Salmonella enterica subsp

Cyspecies: Salmonella enterica subsp. enterica serovar Typhi

Cybace: Salmonella enterica subsp. enterica serovar Typhi

A;Note: this species has also been called Salmonella typhi

C,Dace: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002

"Sequence and transcriptional regulation of com101A, a locus required for genetic transformation in Haemophilus influenzae.";

J. Bacteriol. 173:4683-4691(1991).

-! FUNCTION: Involved in transformation (competence for DNA uptake).

-! SUBCELLUJAR LOCATION: Outer membrane (Probable).

-! SIBCLELUJAR LOCATION: Outer PULD/OUTD/EXED/XPSD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        STRAIN=Rd / KW20 / ATCC 51907;

Reversible dissociation of thiolate ligands from molybdenum in an enzyme of the dimethyl sulfoxide reductase family.";

ENCYMENTON: Terminal reductase during anaerobic growth on various sulfoxide and n-oxide compounds.

-!- COMPANTATIO FACTIVITY: Reduces various N-oxide and sulfoxide compounds including trimethylamine N-oxide and sulfoxide.

-!- COFACTOR: Binds 1 molybdenum ion and 2 molybdopterin guanine dinucleotide (MGD) groups per subunit.

-!- SUBGELLUAR LOCATION: Periplasmic.
-!- SUBCELLUAR LOCATION: Periplasmic.
-!- FPTW: Predicted to be exported by the Tat system. The position of the signal peptide cleavage has been experimentally proven.
-!- SIMILARITY: BELONGS TO THE PROKARYOTIC MOLYBDOPTERIN-CONTAINING OXIDOREDUCTASE FAMILY.

"Two functional thioredoxins containg redox-senseltive vicinal dithiols from the Chlamydomonas outer dynein arm.",

J. Biol. Chem. 271:6283-6291(1996).

-!- FUNCTION. MAY BE INVOLVED IN REGULATING THE REDOX STATE OF FUNCTIONALLY IMPORTANT THIOL GROUPS WITHIN DYNEIN.

-!- SUBUNIT: CONSISTS OF AT LEAST 3 HEAVY CHAINS (ALPHA, BETA AND GAMMA), 2 INTERMEDATE CHAINS AND 8 LICHT CHAINS.

-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY.
                                                                                                                                                        01-NOV-1997 (Rel. 35, Created)

-!- FUNCTION: THIS PROTEIN IS A COMPONENT OF THE ACETYL COENZYME A

CARBOXYLASE COMPLEX; FIRST, BIOTIN CARBOXYLASE CATALYZES THE

CARBOXYLATION OF THE CARBOXYL GROUP TO FORM MALONYL-COA.

-!- PATHWAY: Long-chain fatty acid biosynthesis; first step.

-!- SUBUNIT: Homodimer (By similarity).

II. Sequence determination of the entire genome and (1996).

Synechocystis sp. strain PCG6803. II. Sequence determination of the entire genome and (1996).

In FWOTION: Catalyzes a salvage reaction resulting in the formation of AMP, that is energically less costly than de novo synthesis.

CAPALYTIC ACTIVITY: AMP + diphosphate = adenine + 5-phospho-alpha-D-Tibose 1-diphosphate.

PATHWAY: Putine salvage.

SUBUNIT: Homodimer (By similarity).

SUBUNIT: Homodimer (By similarity).

SUBUNIT: SIELONGS TO THE PURINE PYRIMIDINE
PHOSPHORIBOSYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Okumura S.,

"A histone HI protein in sea urchins is encoded by a poly(A) + mRNA.";
Proc. Natl. Acad. Sci. U.S.A. 85:4123-4127(1988).
-!- FONCTION: HISTONES HI ARE NECESSARY FOR THE CONDENSATION OF
NUCLEOSOME CHAINS INTO HIGHER ORDER STRUCTURES.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE HISTONE HI/HS FAMILY.
                                                                                                                              Strongylocentrotus purpuratus (Purple sea urchin).
